

Wireless communications equipment must be installed at your retail location for you to sell Florida Lottery games. An installation technician will survey your location to determine the optimum placement of this equipment.

Inside Equipment

Equipment installed INSIDE your store:

7 in. Transaction Display

Or

20 in. Transaction Display

TSP (Ticket Checker)

Flex® Terminal

Handheld Scanner

Printer

--Indoor Communications Equipment--

Satellite Modem
and a
Cellular Modem
(If Applicable)

Outside Equipment

Exterior Satellite Dish:

Diameter: 2.42 ft. / .74 meters
Weight: 100 to 700 lbs. installed,
including weights

Whether your store receives a satellite dish or satellite dish and a cell modem will depend on your location.

Installation of a dish may require access to the roof of your building. If you know of any roof weight restrictions at your location, please inform the Lottery prior to the installation date.

Non-penetrating roof mounts will be used to secure the dish whenever possible. Existing holes will be used for cables whenever possible.

FREQUENTLY ASKED QUESTIONS

Q What type of communications equipment will enable me to sell Florida Lottery products?

A IGT will provide you with wireless communications equipment which will provide a direct link to the Lottery's processing center.

Q What is the cost of equipment and maintenance to retailers?

A All equipment and maintenance is provided at no charge. Retailers will pay a weekly service charge of \$10.

Q What about training?

A IGT and the Florida Lottery will provide all the training you and your staff will need to be a successful Florida Lottery retailer. IGT will provide training on the operation of the terminal. The Lottery will provide training on accounting procedures, ticket inventory control and retailer responsibilities.

Q Who will be responsible for the installation of the communications equipment?

A IGT Corporation, partner of the Florida Lottery, will be responsible.

Q What do Lottery retailers need to do to prepare for the installation of the communications equipment?

A Retailers need to provide counter space and power outlets for the terminal and peripherals.

Q How will the equipment be installed and what modifications will be made at my location?

A STEP I - Site Survey

IGT may need to gain roof access at your location to determine the best placement for the outdoor equipment.

STEP II - Installation of Outside Communication Equipment

IGT will mount and secure the communications equipment. No holes will be drilled into the roof during a standard installation. If a hole must be drilled, permission will be obtained.

STEP III - Installation of Inside Communication Equipment

Cabling will be used to connect the outdoor wireless equipment through an existing point of entry to a receiver mounted inside.

Q If I don't want a dish or other hardware on the roof, can I choose another site for them to be installed?

A IGT will identify the most appropriate installation site for your location.

Q What if damage occurs to my location during the installation process?

A IGT is fully insured to cover the installation process, or any damage caused by the equipment. A certificate of insurance is provided to each new retail location prior to the installation.
